DRUG	FORM	DOSING	COMMON SIDE EFFECTS	DURATION OF EFFECTS	PROS	PRECAUTIONS
FIRST LINE						
METHYLPHENIDATE						
RITALIN METHYLIN METADATE Generic MPH	Short Acting Tablet 5 mg 10 mg 20 mg	Starting dose for children is 5 mg twice daily, 3-4 hours apart. Add third dose about 4 hours after second. Adjust timing based on duration of action. Increase by 5-10 mg	Insomnia, decreased appetite, weight loss, headache, irritability, stomachache, and rebound agitation or exaggeration of pre-medication symptoms	About 3-4 hours. Most helpful when need rapid onset and short duration.	Works quickly (within 30-60 minutes). Effective in over 70% of patients.	Use cautiously in patients with marked anxiety, motor tics or with family history of Tourette syndrome, or history of substance abuse or history of cardiac disease
		increments. Daily dosage above 60 mg not recommended. Estimated dose range .36 mg/kg/dose	as it is wearing off.			Don't use if glaucoma or or MAOI.
FOCALIN (with isolated dextroisomer) FOCALIN XR (.5 immed, .5	Short Acting <u>Tablet</u> 2.5 mg	Start with half the dose recommended for normal short acting mehtylphenidate above.	As above. There is suggestion that	About 3-4 hours. Most helpful when need rapid onset and short duration.	Works quickly (within 30-60 minutes). Possibly better for use	As above. Expensive compared to
delayed)	5mg 10mg 15mg, 20mg <b>30mg, 40mg</b>	Dose may be adjusted in 2.5 to 5 mg increments to a maximum of 20 mg per day (10 mg twice daily).	Focalin (dextro-isomer) may be less prone to causing sleep or appetite disturbance.	Only formulation with isolated dextro-isomer.	for evening needs when day's long acting dose is wearing off. May sprinkle etc	other short acting preparations.
RITALIN SR	Mid Acting Tablet	Start with 20 mg daily. May combine with short acting for	Insomnia, decreased appetite, weight loss,	Onset delayed for 60-90 minutes. Duration	Wears off more gradually than short	As above.
METHYLIN ER METADATE ER	20mg Mid Acting Tablet 10mg 20mg	quicker onset and/or coverage after this wears off.	headache, irritability, stomachache.	supposed to be 6-8 hours, but can be quite individual and unreliable.	acting so less risk of rebound. Lower abuse risk.	Note: If crushed or cut, full dose may be released at once, giving twice the intended dose in first 4 hours, none in the second 4 hours.
RITALIN LA	Mid Acting Capsule	Starting dose is 10-20 mg once daily. May be adjusted weekly	Insomnia, decreased appetite, weight loss,	Onset in 30-60 minutes. Duration about 8 hours.	May swallow whole or sprinkle ALL contents	Same cautions as for immediate release.
0% immediate release beads	20 mg 30mg 40mg	in 10 mg increments to maximum of 60 mg taken once daily. May add short acting	headache, irritability, stomachache, and rebound potential.		on a spoonful of applesauce. Starts quickly, avoids mid-	
and 50% delayed release beads	Mid Acting Capsule	dose in AM or 8 hours later in PM if needed.			day gap unless student metabolizes medicine very rapidly.	If beads are chewed, may release full dose at once, giving entire contents in first 4 hours.
METADATE CD 30% immediate release and 70% delayed release beads	10 mg 20 mg 30mg					

CONCERTA 22% immediate release and 78% gradual release	Long Acting Tablet 18 mg 27 mg 36 mg 54 mg 54 mg	Starting dose is 18 mg or 36 mg once daily. Option to increase to 72 mg daily. Patch comes in various dosing	Insomnia, decreased appetite, weight loss, headache, irritability, stomachache.	Onset in 30-60 minutes. Duration about 10-14 hours.	Works quickly (within 30-60 minutes). Given only once a day. Longest duration of MPH forms. Doesn't risk mid-day gap or rebound since medication is released gradually throughout the day. Wears off more gradually than short acting, so less rebound. Lower abuse risk. Well tolerated.	Same cautions as for immediate release. Do not cut or crush. Same as other stimulants.
(Patch)		strengths (10, 15, 20, 30mg).	appetite, weight loss, headache, irritability, stomachache.		Easier administration.	
DEXTROAMPHETAMINE	FORM	DOSING	COMMON SIDE EFFECTS	DURATION OF EFFECTS	PROS	PRECAUTIONS
DEXTROSTAT	Short Acting Tablet 5 mg 10mg Short Acting Tablet 5mg	For ages 3 -5 years: starting dose is 2.5 mg of tablet. Increase by 2.5 mg at weekly intervals, increasing first dose or adding/increasing a noon dose, until effective. For 6 years and over, start with 5 mg once or twice daily. May increase total daily dose by 5 mg per week until reach optimal level. Tablet is given on	Insomnia, decreased appetite, weight loss, headache, irritability, stomach ache. Rebound agitation or exaggeration of pre-medication symptoms as it is wearing off. May elicit psychotic symptoms.	Onset in 30-60 minutes. Duration about 4-5 hours.	Approved for children under 6. Good safety record. Somewhat longer acting than mpthylphenidate.	Use cautiously in patients with marked anxiety, motor tics or with family history of Tourette syndrome, or history of substance abuse, or history of cardiace disease. Don't use if glaucoma or on MAOI. High abuse potential particularly in tablet form.
		awakening. Over 6 years, one or two additional doses may be given at 4-6 hour intervals. Usually not need more than 40 mg/day.				
DEXEDRINE SPANSULE	Long Acting <u>Spansule</u> 5 mg 10 mg 15mg	In children 6 and older who can swallow whole capsule, morning dose of capsule equal to sum of morning and noon short acting. Increase total daily dose by 5 mg per week until reach optimal dose to maximum of 40 mg/day.	Same as above.	Onset in 30-60 minutes. Duration about 5-10 hours.	May avoid need for noon dose. rapid onset. Good safety record.	As above. Less likely to be abused intranasal or IV than short acting. Must use whole capsule.
VYVANSE	20mg 30mg 40mg 50mg 60mg 70mg	1 dose per day.	Decreased appetite, difficulty falling asleep, stomach ache, irritability, dry mouth (adults).	All day.	Less GI side effects. Longer acting.May dissolve in water if unable to swallow capsule.	Same as above.

MIXED AMPHETAMINE	FORM	DOSING	COMMON SIDE EFFECTS	DURATION OF EFFECTS	PROS	PRECAUTIONS
ADDERALL	Short Acting Tablet 5 mg 7.5 mg 10 mg 12.5 mg 15 mg 20 mg 30 mg	Starting dose is 5 or 10 mg each morning (age 6 and older). May be adjusted in 5-10 mg increments up to 30 mg per day.	Same as above.	Onset in 30-60 minutes. Duration about 4-5 hours.	Wears off more gradually than dextroamphetamine alone, so rebound is less likely and more mild. AVAILABLE AS GENERIC	Same as for Dexedrine tablets.
ADDERALL XR 50% immediate release beads and 50% delayed release beads	Long Acting Capsule 5 mg 10 mg 15mg 20mg 25mg 30mg	Starting dose is 5 or 10 mg each morning (age 6 and older). May be adjusted in 5-10 mg increments up to 30 mg per day.	Same as above.	Onset in 60-90 minutes (possibly sooner). Duration 10- 12 hours.	May swallow whole or sprinkle ALL contents on a spoonful of applesauce. May last longer than most other sustained release stimulants. Less ikely rebound than with long acting destroamphetamine AVAILABLE AS GENERIC	Same as for Dexedrine Spansules except that it has documented efficacy when sprinkled on applesauce.
SECOND LINE						
ATOMOXETINE STRATTERA	FORM Long Acting Capsule	DOSING Starting dose is 0.5 mg/kg. The targeted clinical dose is	COMMON SIDE EFFECTS In children: decreased appetite, GI upset (can be	DURATION OF EFFECTS Starts working within a few days to one week, but full	PROS Avoids problems of rebound and gaps in	PRECAUTIONS Use cautiously in patients with hypertension,

OTHER						
ALPHA-2 AGONISTS	FORM	DOSING	COMMON SIDE EFFECTS	DURATION OF EFFECTS	PROS	PRECAUTIONS
CATAPRES (clonidine)	<u>Tablet</u> 0.1 mg 0.2 mg 0.3 mg	Starting dose is .02505 mg/day in evening. Increase by similar dose every 7 days, adding to morning, mid-day, possibly afternoon, and aqain	Sleepiness, hypotension, headache, dizziness, stomachache, nausea, dry mouth, depression, nightmares.	Onset in 30-60 minutes. Duration about 3 - 6 hours.	Helpful for ADHD patients with comorbid tic disorder or insomnia. Good for severe impulsivity,	Sudden discontinuation could result in rebound hypertension. Minimize daytime tiredness by starting with evening dose and
CLONIDINE	<u>Tablet</u> 0.1 mg 0.2 mg 0.3 mg	evening doses in sequence. Total dose of 0.13mg/day divided into 3-4 doses. Do not skip days			hyperactivity and/or aggression. Stimulates appetite. Especially helpful in children (under 6) with ADHD symptoms asociated with prenatal insult or syndrome such as Fragile X.	increasing slowly. Avoid brand and generic formulations with red dye, which may cause hyperarousal in sensitive children.
CATAPRES Patch	ТТS-1 ТТS-2 ТТS-3	Corresponds to doses of 0.1 mg, 0.2 mg and 0.3 mg per patch. (If using .1 mg tid tablets, try TTS 2 but likely need TTS 3).	Same as Catapres tablet but with skin patch there may be localized skin reactions.	Duration 4-5 days, so avoids the vacillations in drug effect seen in tablets.	Same as above.	Same as above. May get rebound hypertension and return of symptoms if it isn't recognized that a patch has come off or becomes loose. An immature student may get excessive dose from chewing on the patch.
TENEX (guanfacine)  guanfacine tablets	1 mg 2 mg 3 mg  1 mg 2 mg 3 mg	Starting dose is 0.5 mg/day in evening and increase by similar dose every 7 days as indicated. Given in divided doses 2-4 times per day. Daily dose range 0.5 - 4mg/day. DO NOTskip days	Compared to clonidine, lower chances/severity of side effects, especially fatigue and depression. Also less headache, stomache, nausea, dry mouth. Unlike clonidine, minimal problem of rebound hypertension if doses are missed.	Duration about 6 - 12 hours.	Can provide for 24/7 modulation of impulsivity, hyperactivity, aggression and sensory hypersensitivity. This covers most out of school problems, so stiumlant use can be limited to school and homework hours. Improves appetite. Less sedating than clonidine.	Avoid formulations with red dye as above. Hypotension is the primary dose-limiting problem. As with clonidine, important to check blood pressures with dose increases and if symptoms suggest hypotension, such as light-headedness.
Intuniv (longacting guanfacine)	1mg,2mg,3mg ,4mg	Start at 1 mg/d and increase weekly in 1 mg increments up to max of 4 mg	Same as above.	Duration all day	Benefits of Tenex in once a day dosing	Similar to above

This chart was reviewed / updated July, 2 012.

Treatment includes medical management, behavior modification, counseling, and school or work accommodations. The medications charted above include: (1) stimulants, (2) non-stimulant Strattera (atomoxetine) with effects similar to stimulants, (3) antidepressant Wellbutrin (bupropion) and (4) two antihypertensives; Catapres (clonidine) and Tenex (guanfacine). Stimulants include all formations of methyphenidate (Ritalin, Focalin, Metadate and Methylin) and all forms of amphetamines (Dexedrine, Dextrostat and Adderall). Individuals respond in their own unique way to medication depending upon their physical make-up, severity of symptoms, associated conditions, and other factors. Careful monitoring should be done by a physician in collaboration with the teacher, therapist, parents, spouse, and patient.

Important Note : Medications to treat ADHD and related conditions should only be prescribed by a physician. Information presented here is not intended to replace the advice of a physician.

## General Information about ADHD Medications:

- Document prior treatment successes and failures including adverse reactions.
- Obtain baseline BP, HR, Height & Weight. Labs are not necessary for any Stimulant as a baseline.
- Longer acting agents, such as Metadate ER & CD, Methylin, Concerta, Adderall SR, Ritalin LA are increasingly used in middle school and high school ages so as to avoid the need to go to the nurse, avoiding embarrassment & enhancing compliance.
- Abuse potential is a real but overstated concern, rarely seen, especially with any long acting preparation.
- Use follow up supplemental scales such as the Conners for parents and teachers.
- · If appetite suppression occurs, but otherwise the medication is useful, may use Periactin/Cyproheptedine 2-4 mg BID-TID (This is not a standard treatment, but can be used)
- Adderall XR, Ritalin and Metadate capsules can be opened and sprinkled on food for children that cannot swallow the capsule
